While Operating Engine While Operating Engine The airassisted, lowpressure direct injection system has been combined with the LCDI or Longarc duration CDI ignition system and Engine Control Unit ECU, which performs precision control of fuel mixture, injection timing and ignition timing to maximize combustion efficiency in the TLDI50 engine. The ECU also uses a stratified fuel feed process to provide lean combustion in the lowspeed range, while utilizing more homogenized charge to ensure the fuel mixture is distributed uniformly throughout the combustion chamber when operating in the high speed range to ensure maximum combustion efficiency. The LCDI system offers a longer plug sparking interval, via spark plug, than used with conventional twostroke engines. This is designed to ensure more complete combustion of the mixture in the chamber. Make a point of replacing snap rings as well. 4 When replacing, be sure to use genuine Tohatsu brand parts and lubricants or products recommended by Tohatsu. For removing and installing flywheel. Spring pin tool A Spring pin tool B Needle bearing puller kit 345722270 345722280 3C8727000 For removing and installing gear case needle bearing and For removing and installing spring pins. Bolt 8125 3T5728960. Apply Loctite Primer 7471; wait 5 minutes; then apply Loctite 648 to the hole. 2. Insert the half moon key in the crankshaft and install the drive pulley. 3. It is intended for use with the following parts. Bleed hoses if necessary. Do this by loosening the oil drain screw q on the From oil filter air pump and bleed until all air has been removed from the piping. Be sure to remove the propeller when operating the engine on land. To check level, turn the oil plug counterclockwise to remove it;
